Vulcan P5 DP

A broad spectrum insecticide powder for the control of crawling insects

Contains:
0.5% w/w permethrin

Vulcan P5 DP is a broad spectrum, ready for use insecticide dust for the control of crawling insects and flying insects at rest.

Vulcan P5 DP is simple to use, supplied in either a puffer pack or shaker pack for amateur use or in bulk for professional use in mechanical dusting machines. It is an ideal crack and crevice treatment in areas which cannot be sprayed, providing effective long lasting residual control. Vulcan P5 DP can be applied in voids or around electrical installations where liquid sprays may not be appropriate.

Packaging

100g puffer packs, 300g puffer packs,
270g shaker packs, 4kg tubs

Dustable Powders are very simple formulations where the active ingredient is mixed with a filler of small particle size together with anti-caking agents and adjuvants to produce a free flowing product. There are no emulsifiers and so DPs are not miscible with water.

These simple formulations are used to “dust” an infested area and the target pest picks up a lethal dose as it walks through the dust. This formulation type leaves a very visible deposit so is only of use in certain situations.

Why use Vulcan P5 DP?

- Long residual action when applied in cracks, crevices and voids.
- Can be used in electrical installations where liquid sprays would not be acceptable
- An extremely cost-effective formulation for the control of all insects including cockroaches, fleas, ants and bedbugs. Can be used to treat wasp nests and applied to areas where flies are breeding. Also effective against ticks, spiders and scorpions.

Technical Information

Insects controlled

For use as a surface dust for the control of ants, wasps and general crawling insects.

Application

Residual treatment using a duster or the puffer pack provided

Areas of Use

For use inside all domestic, commercial and industrial premises including kitchens, hotels, dormitories and sleeping areas, hospitals (excluding occupied wards), military establishments and food storage and processing areas. The product leaves a visible deposit so would not usually be applied in indoor exposed areas.

Rate of Application

Apply liberally into cracks and crevices and other areas where insects may be hiding. For the control of fly larvae breeding in organic matter apply at a rate of approximately 50g product/m² surface area and re-apply when more organic material is added.

Directions for use

Using the puffer pack or a duster machine with a spike or crack and crevice attachment inject the powder directly into cracks, crevices, voids and electrical boxes where insects hide. A liberal application will provide residual control lasting several weeks or longer.

READ THE LABEL BEFORE USE

Storage & Disposal

Keep contents tightly sealed in the original container and clean up any spillages immediately.
Store in a cool, dry location.
Store away from food, drink and animal feeding stuffs.
Keep out of reach of children.
Avoid release to the environment.
Dispose of the contents and container in accordance with local regulations.

Handling

Do not eat, drink or smoke while using this product.
Ensure adequate ventilation and do not breathe in the dust.
Wear protective gloves/protective clothing/eye protection/face protection.
Do not get in eyes, on skin or on clothing.

Precautions

Harmful if swallowed.
Harmful if inhaled.
May cause an allergic skin reaction.
Causes serious eye irritation.
Very toxic to aquatic life with long lasting effects.

WARNING
