Pempapel

Insect repellent concentrate for the impregnation of fabric and mosquito nets

Contains:

10% w/w permethrin

PelGar's insect repellent concentrate Pempapel provides protection against mosquitoes, midges, ticks and other biting insects to help protect from tropical diseases.

When diluted with water Pempapel provides a dipping solution for the impregnation of fabrics and can be used on all types of military uniforms, tents, mosquito nets, rucksacks and camping fabrics as well as civilian clothing.

Packaging

1 litre autodose bottle

Pempapel will provide up to 3 months protection against biting insects depending on weather and usage conditions. The product is non-irritant, non-staining and odourless.

The highly effective permethrin formulation has been created to help protect against tropical diseases such as Malaria, Dengue Fever, Zika virus and West Nile virus.

Why should you use Pempapel?

- Long-lasting protection
- Suitable for all tropical climates
- Non staining and odourless
- Nato Approved

Technical Information

Insects controlled

Permapel will kill and repel mosquitoes, midges, ticks and other biting insects

Application

By dipping.

Areas of use

Permapel can be used on uniforms, tents, mosquito nets, rucksacks and camping fabrics as well as general clothing.

Application rate

Use 50ml of Permapel concentrate and dilute with 2 litres of clean water. This is sufficient to treat up to 10m² of fabric. This will deliver the WHO recommended application of 500mg per m².

Directions for use

Ensure item is clean and dry.

Ensure item to be treated is fully submerged in the solution for at least three minutes.

Allow to air dry for at least 2 hours. Do not handle treated fabrics until dry and air thoroughly before use.

NOTE: Washing removes most of the Permethrin from fabrics and treated nets – re-treat after washing or after 3 months of normal use.

This product is registered for NATO use:
NSN 6840-99-300-0661

READ THE LABEL BEFORE USE
